UniSee Mount

Self-aligned by the power of gravity

When using seamless video walls, it becomes even more important to perfectly align all tiles in order not to distract the viewing experience. Therefore the mounting structure is a key element of the video wall system, as it ensures the precise alignment of the panels without damaging the sensitive edges.

That's why Barco has completely redesigned the mounting structure, adapting it to the new generation of bezel-less video walls. The result is the UniSee Mount - sheer mechanical innovation that uses the power of gravity to keep the panels perfectly in place, allowing you to distribute uninterrupted content across multiple screens.

UniSee Mount's self-alignment guarantees the smallest possible gap

Always the smallest possible bezel

Aligning the displays of an LCD video wall can be a tedious job. The UniSee Mount makes this task a lot easier. Using the power of gravity, the screens slide into perfect position automatically, in any direction along the X, Y and Z axes. Perfect alignment has now become pure science - not laborious craft.

Faster installation

The UniSee Mount was designed to make installation easy and fast. There are fewer connection points, and the cabling can be positioned neatly inside the guiders. Installs now require much less effort, resulting in faster commissioning.

Adapts to your needs

The UniSee Mount allows both portrait and landscape orientations. Without any customization, it allows all possible video wall configurations.

Protecting the edges

The problem with traditional wall mounts is that they are extremely rigid. This means that there is no flexibility during installation. So you install the screens either with bigger inter-screen gaps, or - when you try to align them perfectly together - you risk damaging the panel edges. UniSee Mount's self-alignment mechanism makes sure the panels align gently, creating the best possible viewing experience, risk-free.

Easy servicing

Another revolutionary aspect of the UniSee Mount is that it facilitates servicing. Using a simple wrench to move the adjacent screens, all individual panels are easily accessible from the front - even the middle panels. Each panel can be taken out swiftly and securely, making maintenance easier. Moreover, cabling and electronics can also be pre-tested before screen installation.

Servicing and replacing the middle panel has never been easier
