Collaboration: Redefined

Collaborative Telepresence from Cyviz

Cyviz is a high-end technology company that creates exceptionally intuitive visual display systems, which provide businesses a more sophisticated and robust way to collaborate.

We've looked beyond mere "talking heads" video conferencing. Collaborative telepresence from Cyviz is upending the going trend by bringing together colleagues, customers and partners from different regions into one pristine and easy work process.

- Plug-and-play ease of use:
  Effortlessly share data and partner on multiple, live applications through our instinctive display controller, or your own laptop. Using our systems will feel very familiar.

- Standardized and scalable:
  Outfit one office or twenty—our flexible solutions will conform to varied requirements across your organization, all while providing the same amazing performance in seamless, high-definition.

- Around-the-clock, around-the-globe support:
  From the moment you make your purchase with Cyviz— through installation and beyond—we'll be helping you to get the most out of your investment.

Unrivaled Performance

Cyviz provides highly flexible collaborative telepresence solutions to companies and organizations across a wide range of fields, each with unique requirements.

With customers in the energy, manufacturing, education, life science, government, defense, corporate and FMCG sectors, our systems are designed to handle an impressive array of demands.

- Unlimited "one-touch" meeting presets allow any user to connect to his or her team from any Cyviz system. Our dynamic video conferencing accommodates up to four parties and features full data-sharing of the displaywall.

- Dynamic picture-in-picture capability is just the beginning. Pull multiple images and applications from multiple sources into your video work session—all in HD quality. Plus, individual participants can adjust image size and move applications freely around the screen for a fully-customized experience.

- Our screens are an essential part of the equation: Video conferencing with more than one person gathered around even the largest of monitors can feel crowded. Our displaywalls allow for more natural communication, while our powerful cross-projection technology captures the finer details of your work in seamless, high-definition.

Cyviz screens and projection technology have been designed for professionals who require high levels of photorealism.

Multiple images, multiple sources—our systems boast unsurpassed flexibility.

Standardized Systems, Limitless Applications

By applying ourselves to making our customers' lives simpler, we have created a formula for product integration on a systems level that has become the industry benchmark.

Complete Standardization

The Cyviz approach to the design, control and support of our systems represents a significant divergence from that of the current market.
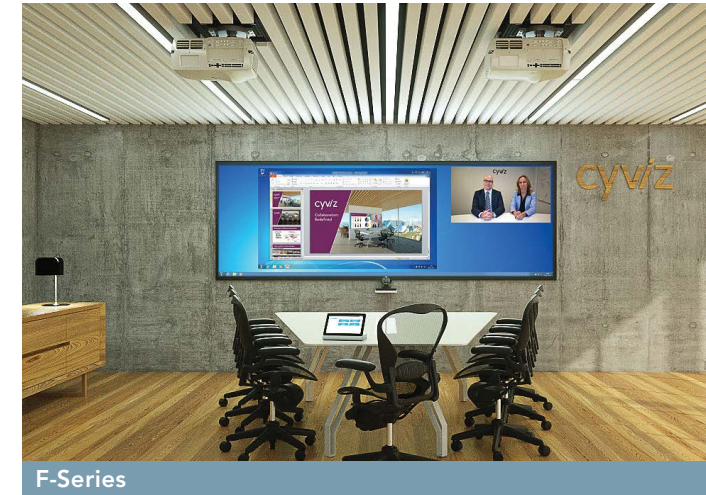

Our philosophy is to standardize throughout, hence simplifying what used to be complex. This applies to software for room control and management, as well as hardware for both entry-level and highly sophisticated systems.

Ease of use, ease of deployment and ease of operations for any system configuration is our governing principle. This translates into a vastly improved return on our customers' investment in collaboration technologies.

Key Building Blocks

All of our systems are built on a set of expandable core components that include:

1. Projector or Panel
2. Cyviz Display Controller
3. Cyviz Image Grabber
4. C-Series Cisco Codec
5. Matrix Switch
6. XPO.4 Video Processor
7. Multi-Touch Monitor

### Work Confidently with Total Operational Support

Our systems have been designed to combat obsolescence. We are constantly making refinements to our operating systems and will continue to upgrade your solutions as we do. What's more, all of our systems include built-in troubleshooting and problem-reporting capabilities for everything from broken lamps and high operating temperatures to non-responsive equipment. We've also integrated a groundbreaking feature into our Cyviz Display Controller: a "user rating" capability that enables your support team to measure if end-users find the systems to be operational and easy to use. We continue to measure our success on how easily our systems enable you to achieve yours.

Our Product Portfolio

The F-Series: The F-Series is our front-projected, ready-to-use solution, built to fit any facility.

The R-Series: The rear-projected R-Series boasts the highest image quality and resolution, and delivers the best ergonomic experience.

The P-Series: The panel-based series is ideal for command and control environments. Easy to install and maintain and with seams reduced to an industry low, the P-Series allows a clear focus on brilliant imagery, regardless of wall size.
