

Collaboration Solutions – Divisible Spaces

Certified Q-SYS solutions

Example Diagrams

UC Platform Integration

Features may vary based on OS and application.

Q-SYS Divisible Room Features

Automatic Multi-Camera Switching

Add as many network-based Q-SYS cameras to your space as needed and Q-SYS will deliver a single video stream to your UC platform while providing live switching. This ensures a more collaborative training experience.

Seamless Hybrid Meetings

Whether you've standardized on a UC platform or need to flex your room to accommodate BYOM, simply connect a single USB to a Q-SYS Core processor or USB endpoint and share the room's audio and conference camera feeds with remote meeting attendees.

Video Streaming & Collaboration

Transport HDMI video and audio from PCs to LED displays and projectors anywhere in the space without additional HDMI extenders, control processors, bridges or complicated programming. [Learn More.](#)

Intuitive Control

With Q-SYS full-featured control platform, you can customize the AV experience based on how your users utilize the space. [Learn more.](#)

Keep Meetings on Track

Q-SYS Reflect Enterprise Manager provides real-time status and event logs to catch issues before users do and enables remote user interface control to let you remotely troubleshoot or assist users to reduce downtime.
